

ABSTRACT:

This telecommunications device (21, 22 or 23) forms part of a system comprising base stations (10, 12). This system permits the devices forming it to relay information among them. It is proposed to provide the devices with a plurality of transceiver devices (RX1, RX2, ..., RXm, TX1, TX2, ..., TXn) for exchanging information with other devices and/or base stations. Application: ODMA mobile radios
